New Project

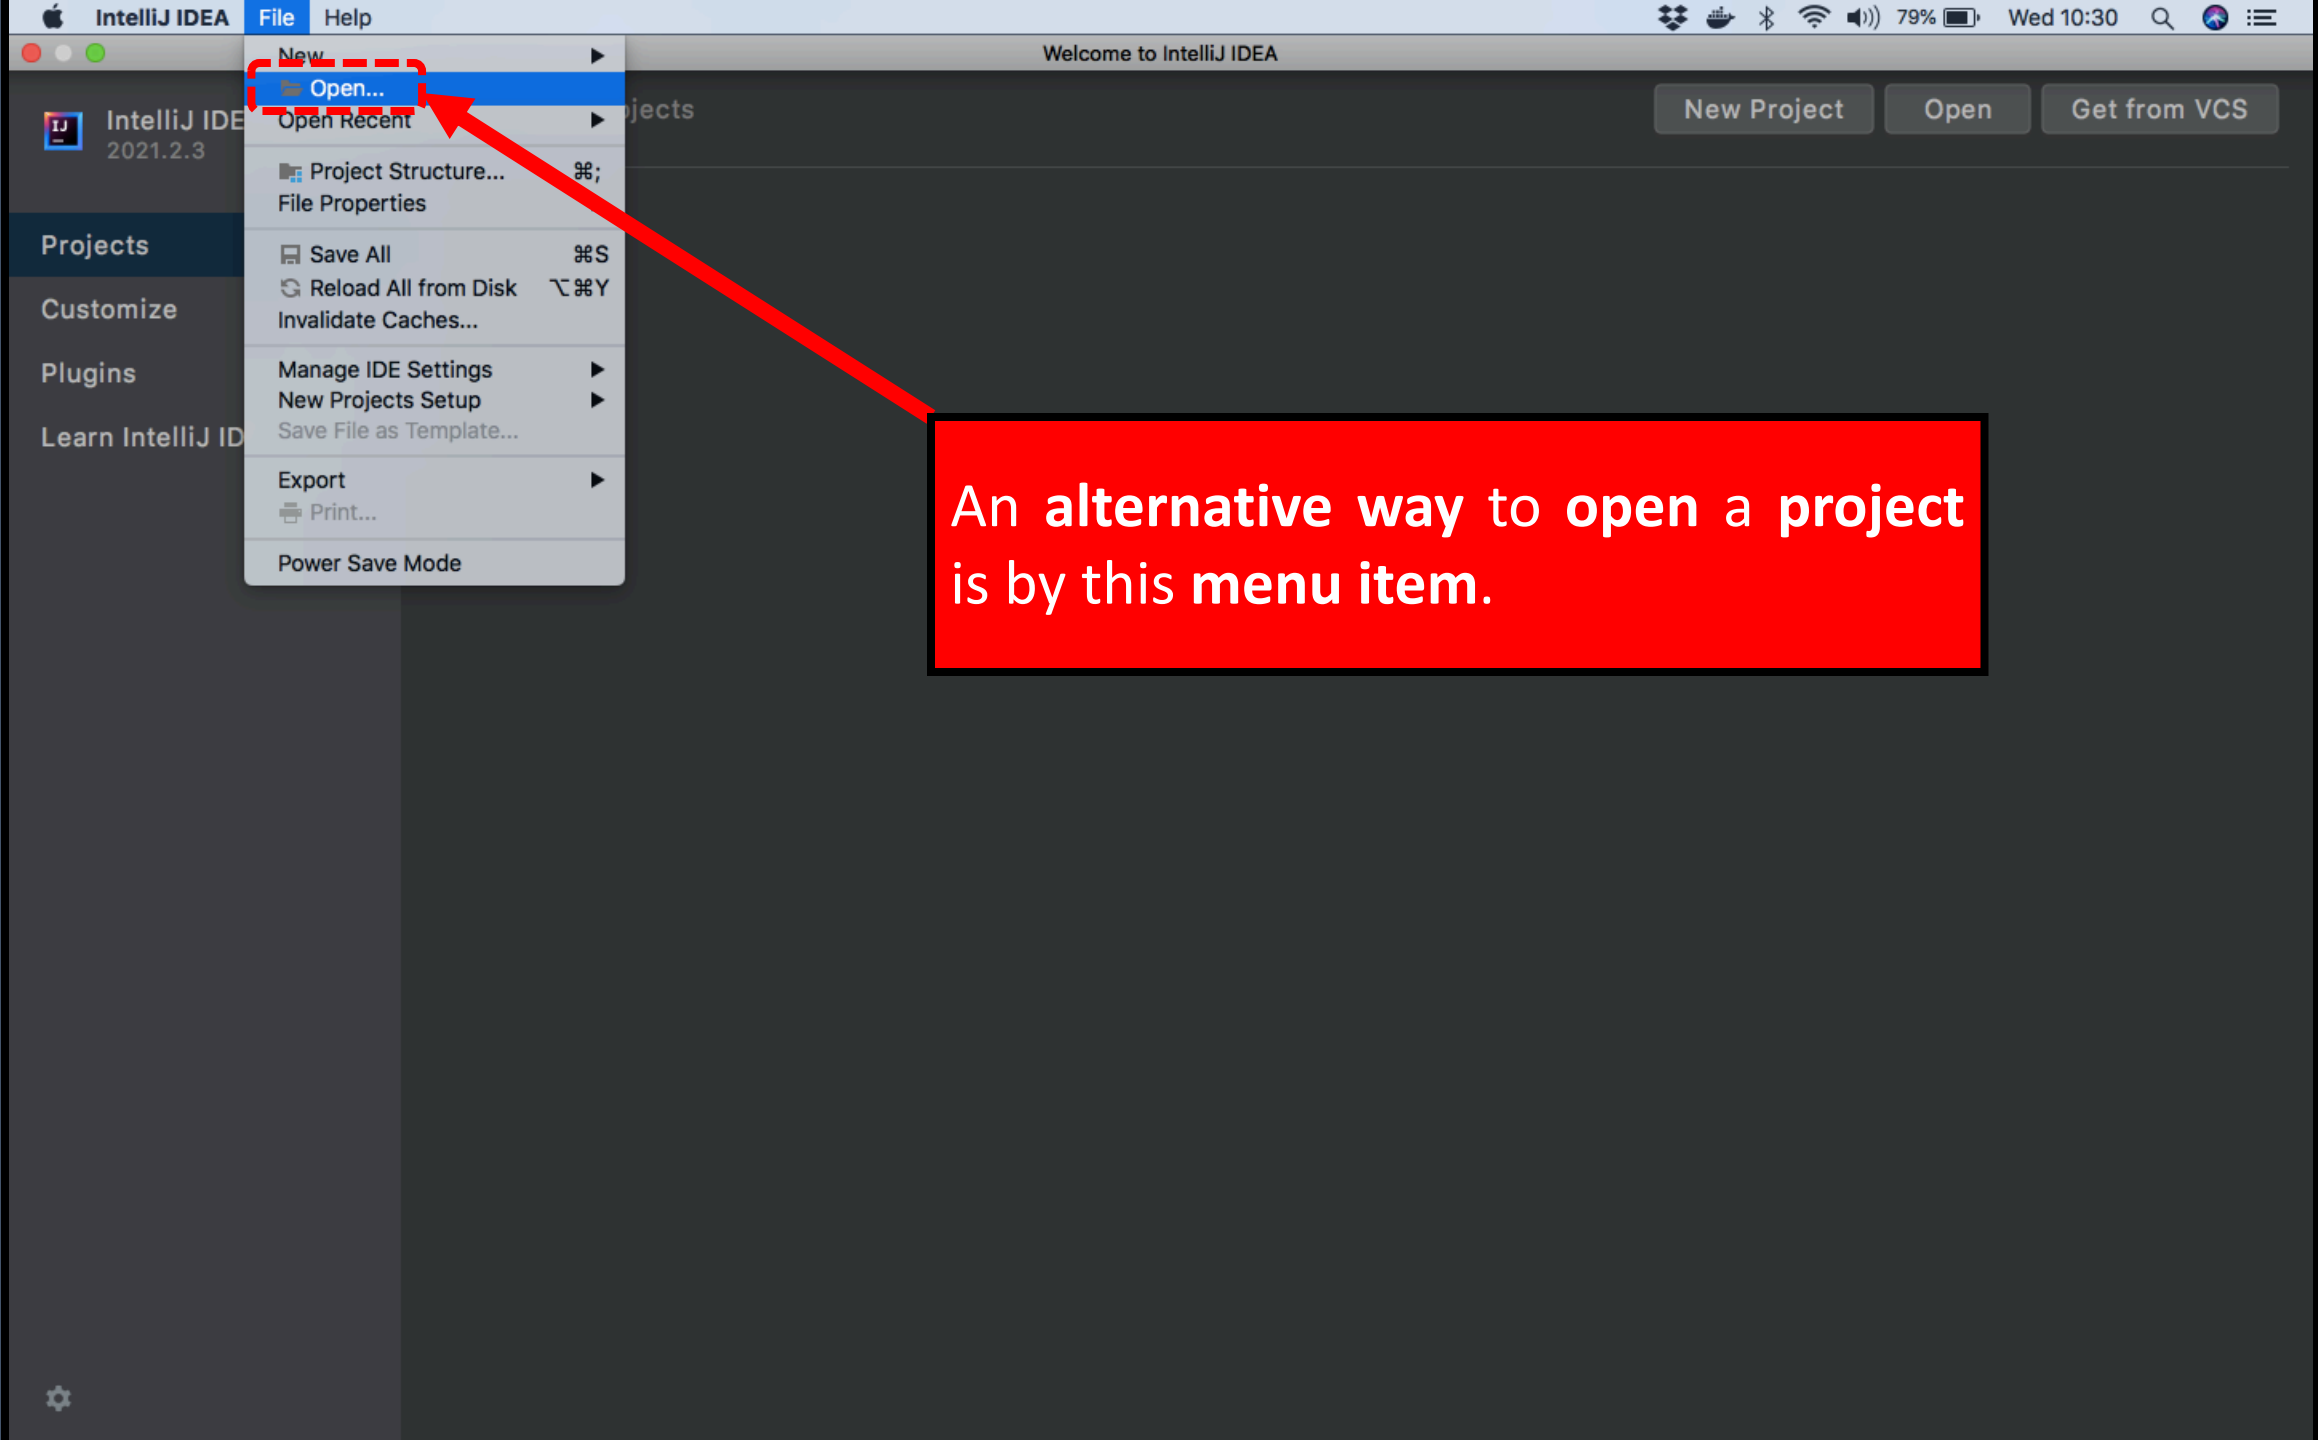

Open

Get from VCS

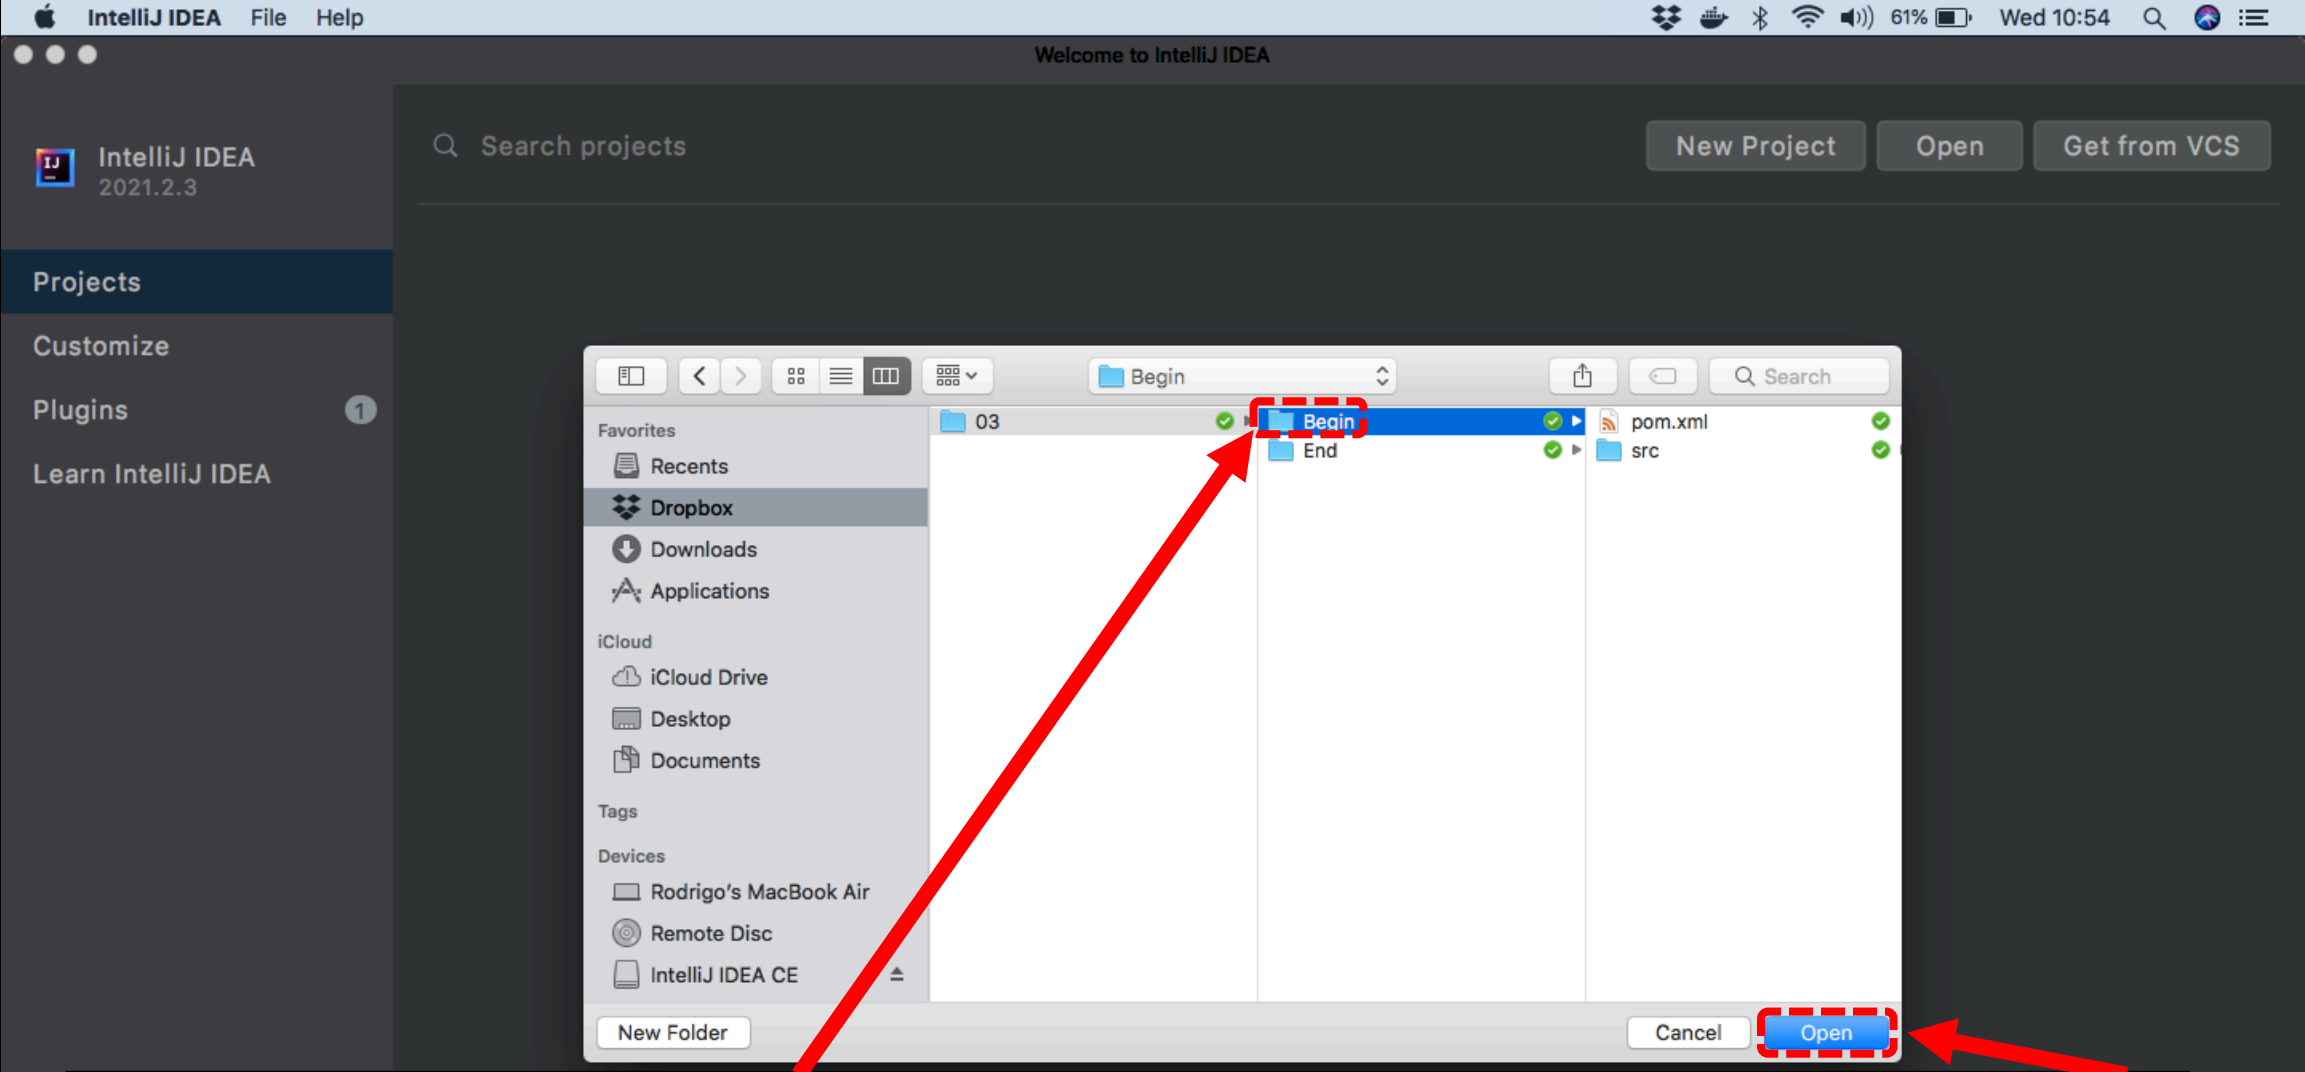

Select **Open**.

Nothing to show

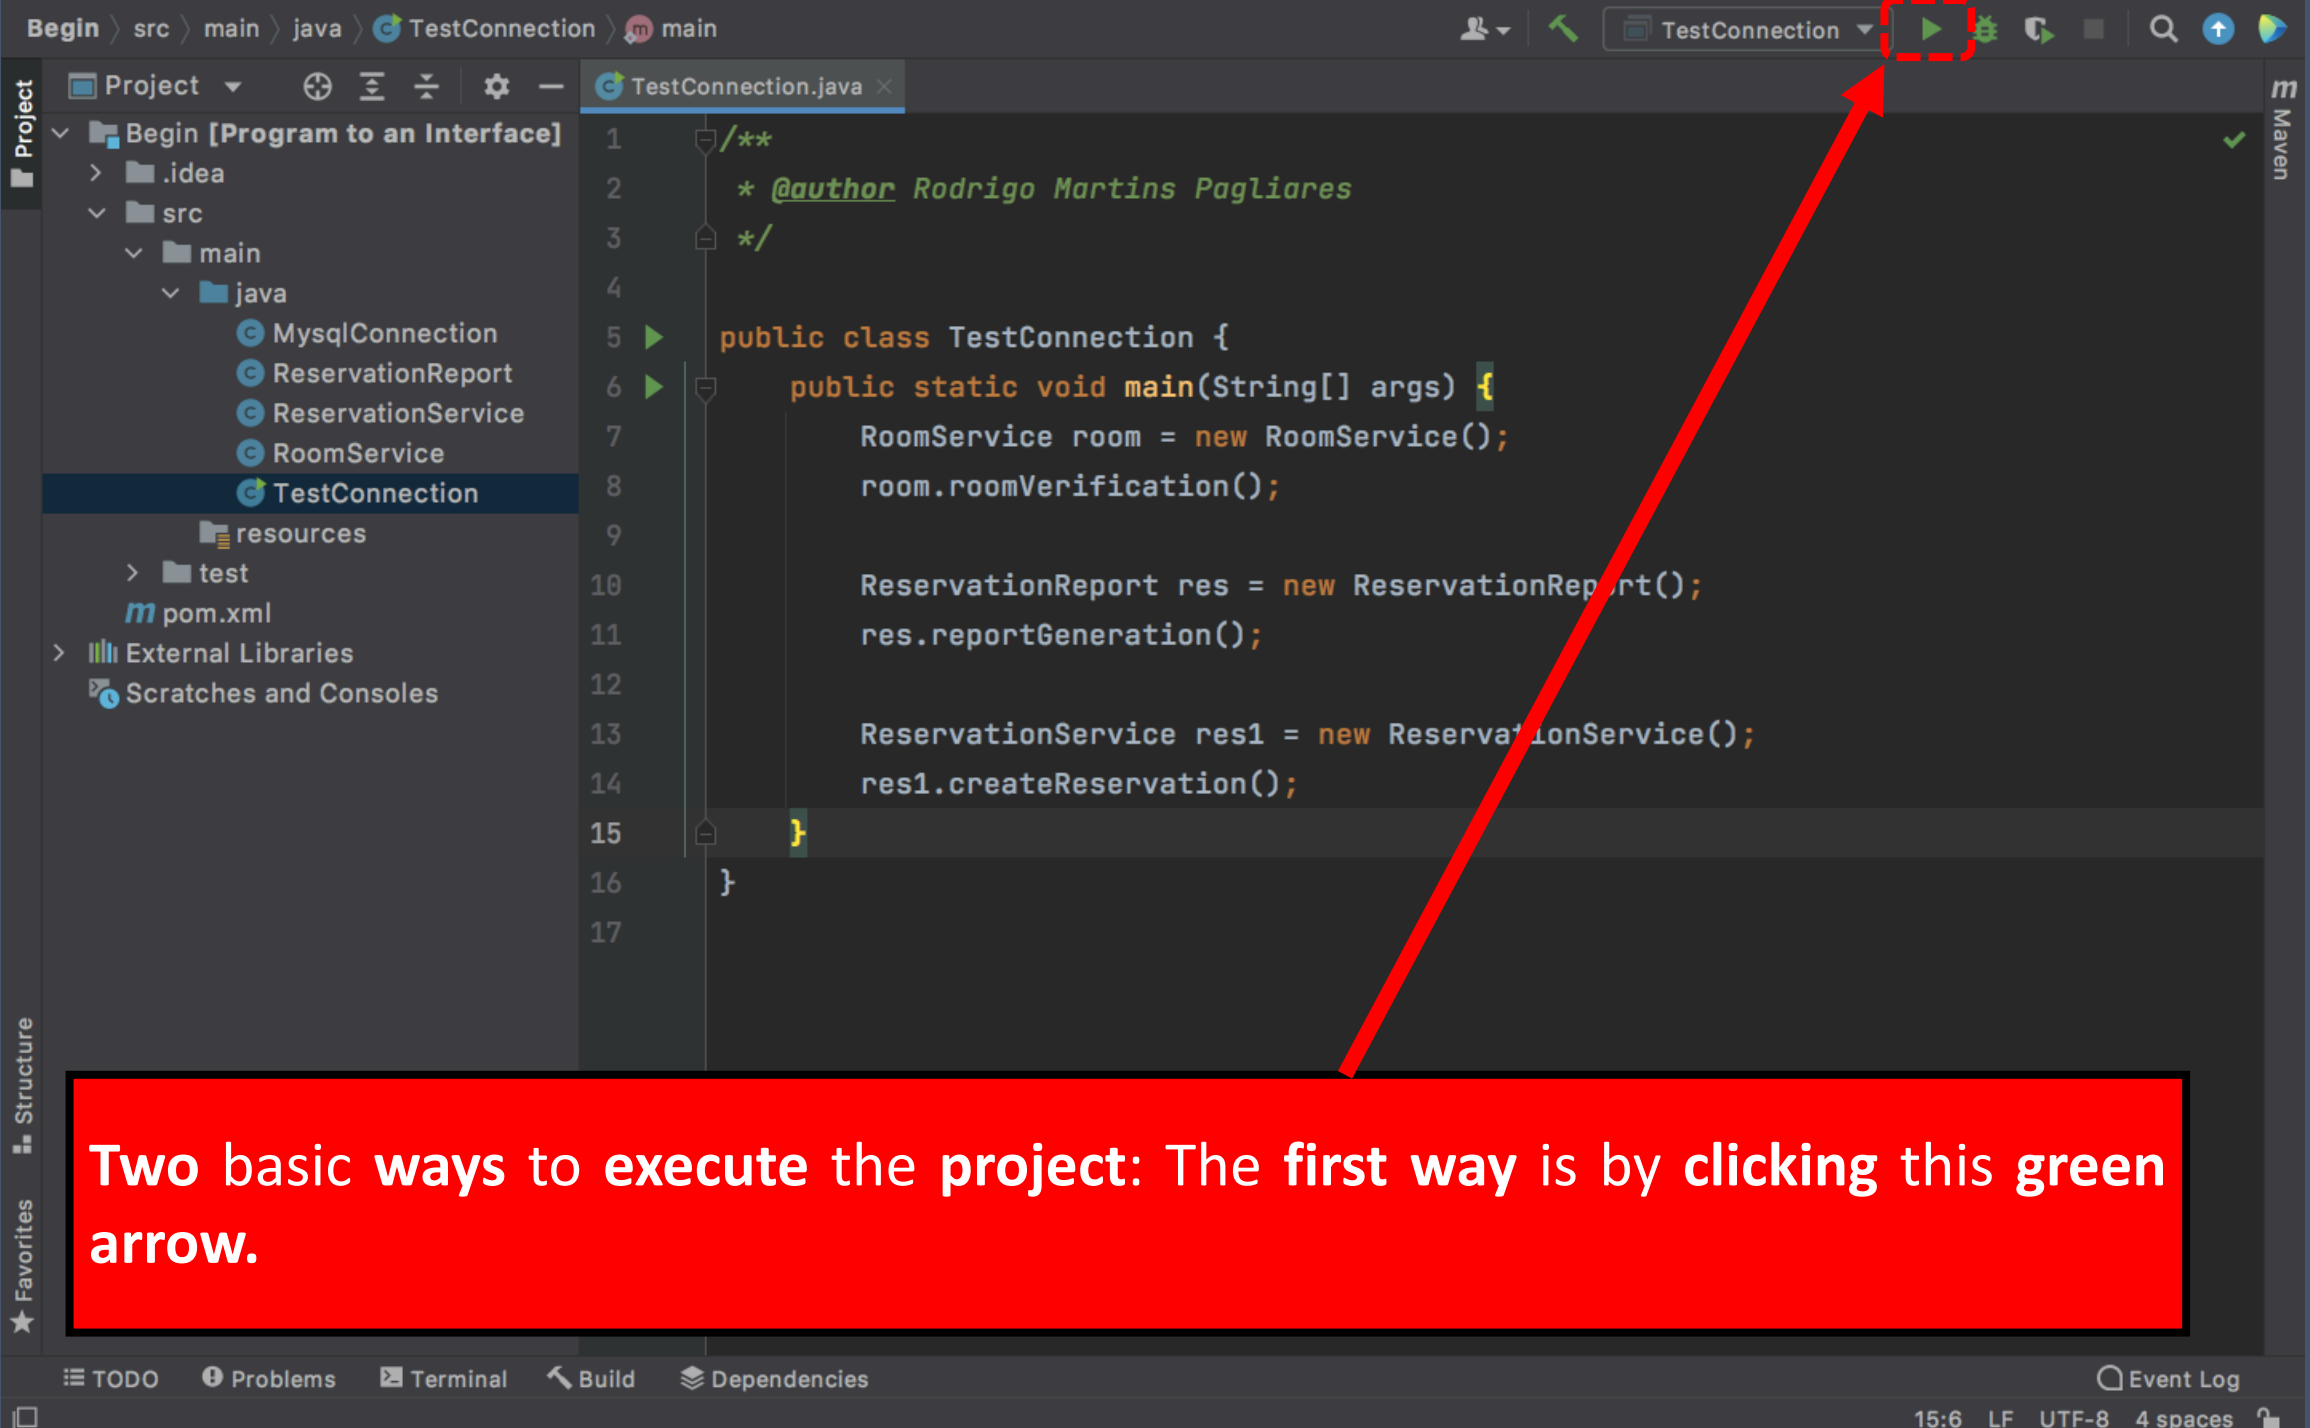

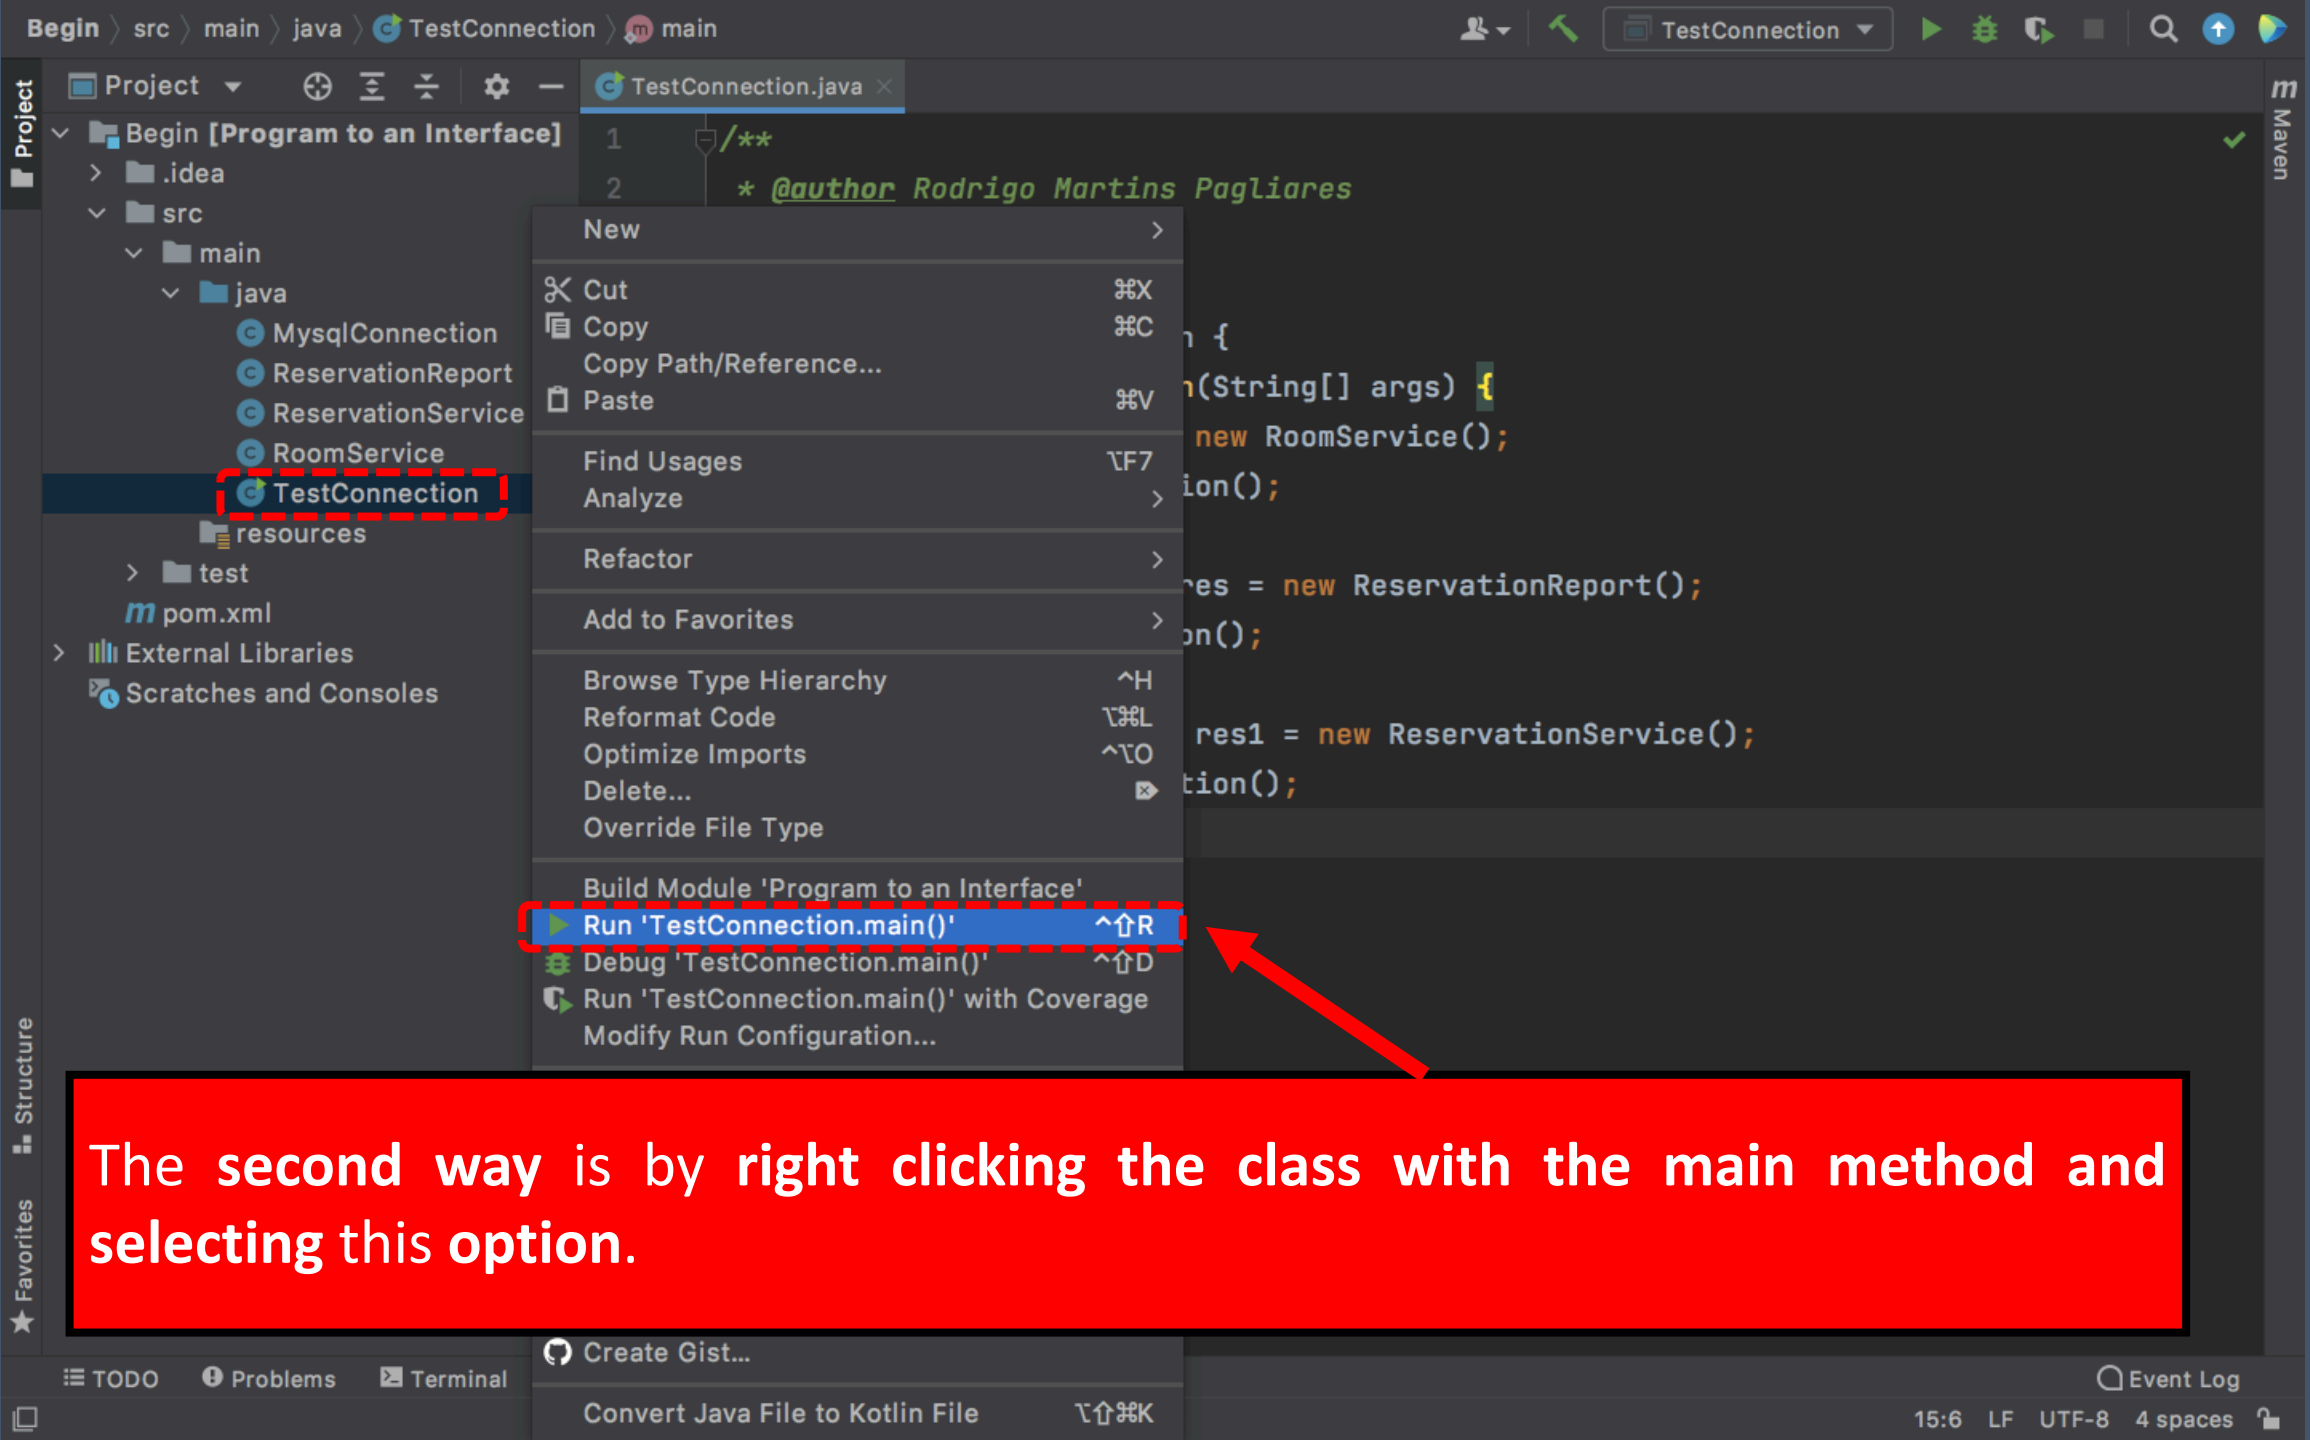

An alternative way to open a project is by this menu item.

Navigate to the place in your file system where you downloaded the source-code examples. Here I am demonstrating with the initial version of the lecture 03 – Program to an interface and not to an implementation. Click open.

Two basic ways to execute the project: The first way is by clicking this green arrow.

The second way is by right clicking the class with the main method and selecting this option.

Begin > src > main > java > TestConnection > main

TestConnection.java

```
5 public class TestConnection {
6     public static void main(String[] args) {
7         RoomService room = new RoomService();
8         room.roomVerification();
9
10        ReservationReport res = new ReservationReport();
11        res.reportGeneration();
12
13        ReservationService res1 = new ReservationService();
14        res1.createReservation();
15    }
16 }
```

Run: TestConnection

```
/Library/Java/JavaVirtualMachines/adoptopenjdk-16.jdk/Contents/Home/bin/java -javaagent:/Applications/IntelliJ IDEA CE
Connecting to MySQL

After executing the class with the **main** method you should see the **program output** in the **console window**.
