

Inglês técnico - Exercícios 09/04/26 e 10/04/26

Verb to Be

1. Complete com am / is / are

1. The server ____ online.
2. The routers ____ connected to the network.
3. I ____ studying HTTP and HTTPS.
4. The protocol TCP ____ reliable.
5. The clients ____ requesting data from the server.
6. DNS ____ responsible for domain name resolution.

2. Complete com was / were

1. The website ____ offline yesterday.
2. The packets ____ lost during transmission.
3. The connection ____ very slow last night.
4. The servers ____ overloaded during the attack.
5. DNS ____ not working properly.
6. The users ____ unable to access the system.

3. Complete com will be

1. The system ____ updated tonight.
2. The network ____ more secure after the update.
3. The server ____ available after maintenance.
4. The connection ____ faster with fiber optics.
5. HTTPS ____ mandatory in the future.
6. The data transfer ____ more efficient.

5. Transforme as frases (Presente → Futuro)

1. The connection **is** fast.
2. The system **is** available.
3. The network **is** protected.
4. The protocol **is** efficient.

6. Negativa (use not)

1. The website is secure.
2. The network is stable.

3. The packets are encrypted.
4. The server was available.
5. The connections were stable.
6. The system will be ready.

7. Interrogativa

1. The network is secure.
2. The server was offline.
3. The packets are encrypted.
4. The system will be available.
5. The users are connected.

The World Wide Web

The World Wide Web (usually called the Web, or web, abbreviated as WWW or W3) is a system or interlinked hypertext documents accessed via the Internet. It is the most popular part of the Internet, partly because it displays most information in a visually appealing format. A website is a collection of interconnected web pages, which are documents or information resource that is suitable for World Wide Web and can be accessed through a web browser and displayed on a monitor or mobile device. With a web browser, people can view pages that may text, images, videos, sound and other multimedia and navigate between them via hyperlinks. This information is usually in HTML or XHTML format, and may provide navigation to other web pages via hypertext links. The web contains millions of websites and billions of web pages.

Using concepts from earlier hypertext systems, British engineer and computer scientist Sir Tim Berners-Lee wrote a proposal in March 1989 for what would eventually become the World Wide Web. At CERN in Geneva, Switzerland, Berners-Lee and Belgian computer scientist Robert Cailliau proposed in 1990 to use hypertext "... to link and access information of various kinds as a web of nodes in which the user can browse at will", and they publicly introduced the project in December.

"The World Wide Web was developed to be a pool of human knowledge, and human culture, which would allow collaborators in remote sites to share their ideas and all aspects of a common project."

1 - Identifique todos os usos de verbo *to be* no texto acima.

2 - Observe os trechos adaptados do texto e analise o uso do *verb to be*:

- I. *The World Wide Web is a system of interlinked documents.*
- II. *Web pages is suitable for display on devices.*

III. *The Web **was** developed to be a pool of knowledge.*

IV. *Millions of websites **are** available on the Web.*

Assinale a alternativa que apresenta a avaliação correta:

- A) Apenas I e III estão corretas.
- B) Apenas I, III e IV estão corretas.
- C) Apenas II e IV estão corretas.
- D) Todas estão corretas.

3 - Reescreva o trecho abaixo **corrigindo e reorganizando** o uso do *verb to be*, garantindo coerência gramatical e fidelidade ao sentido original:

The web are a system that were created to share information and it be accessible for users around the world.

Qual alternativa apresenta a melhor reconstrução?

- A) *The web is a system that was created to share information and is accessible for users around the world.*
- B) *The web are a system that was created to share information and are accessible for users around the world.*
- C) *The web is a system that were created to share information and be accessible for users around the world.*
- D) *The web are a system that were created to share information and is accessible for users around the world.*

4 - Responda V (verdadeiro) ou F (falso) de acordo com o texto The World Wide Web.

- () A Web é um sistema de documentos em hipermídia interligados e executados na Internet.
- () Os documentos na Web podem estar em forma de vídeos, sons, hipertexto e figuras.
- () Para visualizar a informação na Web, pode-se usar um programa de computador conhecido como navegador, para descarregar informações de servidores web e mostrá-los na tela do usuário.
- () Através das hiperligações o usuário navega na Internet para enviar mensagens.
- () Em 1989 Tim Berners-Lee ajudou a criar o CERN.
- () Com a ajuda de Robert Cailliau, Berners-Lee publicou uma proposta para a World Wide Web com a finalidade de usar hiperligações.

Linking words

1. Complete com o conectivo correto

(and, but, because, so, then)

- a) The code is simple, _____ it is efficient.
- b) The program crashed _____ of a syntax error.
- c) The variable is null, _____ the system stopped.
- d) First, declare the variable, _____ assign a value.
- e) The function works, _____ it is not optimized.

2. Escolha o melhor conectivo

(however, therefore, because, although, in addition)

- a) The code has errors; _____, it cannot compile.
- b) _____ the function works, it is too slow.
- c) The system failed _____ of a memory issue.
- d) The program is efficient; _____, it uses little memory.
- e) The code is simple; _____, it is easy to understand

3. Complete com conectivos de sequência

(first, then, next, finally)

- a) _____, write the code.
- b) _____, compile the program.
- c) _____, fix the errors.
- d) _____, run the program.

4. Complete com conectivos de contraste

(but, however, although)

- a) The code works, _____ it is slow.
- b) _____ the program is correct, it needs improvement.
- c) The system is stable; _____, it needs updates.

5. Complete com conectivos de causa ou resultado

(because, so, therefore, as a result)

- a) The program failed _____ of a bug.
- b) The variable was null, _____ the system crashed.
- c) The code has errors; _____, it cannot run.
- d) The server was down; _____, users lost access.

6. Identifique o tipo do conectivo

- a) The system failed because of a bug. → _____
- b) The code is correct, but it is slow. → _____
- c) First, write the code, then compile. → _____
- d) The variable is null, so the program stopped. → _____
