Introduction to WordPress

Content types

The three content types in WordPress

- **WordPress has three main content types:**
 1. **Posts**
 2. **Pages**
 3. **Media elements**

Posts, pages and media elements

- **Post and pages** are **collections** of various **types** of **content**.
- **Media elements** are any **standalone files** you may **upload** to a **post** or **page**
 - ✓ **Images, video, PDF document** or something similar.

Posts

- The **post** is the **primary content type** in **WordPress**.
 - ✓ When **WordPress** was released in **2003**, it was a **blogging application**, and the **post** was the **only content type**.
- Most **WordPress sites** are **still used** mainly to **publish posts**.

Posts

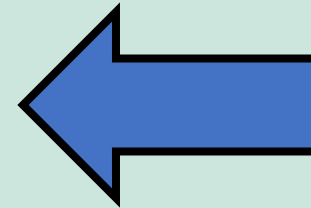

- In a **WordPress site** you can **request** all **posts** published:
 - ✓ in a **certain day** or **month** or **year**.
 - ✓ all posts **written** by a **specific author**.
 - ✓ all posts filed under a specific **category** or **posts** with a **specific tag**

Hello world!

A Post example. Notice the author and date of publishing and category.

Pages

- **Pages are static content.**
 - ✓ They are **meant** to be **standalone** and don't belong in a **flow** of **content** like **posts** do.
- This means that **pages do not have categories or tags or post formats.**
 - ✓ They are **not sorted based** on **publishing date** or **author**.

A Page example. No author, no category and no date of publication.

Sample Page

This is an example page. It's different from a blog post because it will stay in one place and will show up in your site navigation (in most themes). Most people start with an About page that introduces them to potential site visitors. It might say something like this:

" Hi there! I'm a bike messenger by day, aspiring actor by night, and this is my website. I live in Los Angeles, have a great dog named Jack, and I like piña coladas. (And gettin' caught in the rain.)

...or something like this:

" The XYZ Doohickey Company was founded in 1971, and has been providing quality doohickeys to the public ever since.

Located in Gotham City, XYZ employs over 2,000 people and

Media elements

- **Media elements** are typically **uploaded** during the **creation** of **posts** or **pages**.
 - ✓ Can also be **standalone items**.
- When a **media element** like an **image** is **uploaded** to a **post** or **page**, that connection is saved in the **WordPress database**
 - ✓ **WordPress knows** where the **media element** belongs.
- **Media elements** have **custom properties** depending on what **type** of **file** they **contain**.

Media elements are stored in the WordPress library.

Media elements

- Independent, standalone items.
- Can be used and **reused** anywhere on the **site**.
- If you **upload** an **image** to a **post**, and then decide you want to use it in a **page**, or in the **sidebar**, or in the **header**, or **another post**, or **anywhere else**, you can **grab** it from the **media library** and **reuse** it.
- A **media element** can be **used** and **reused** as **many times** as you like without **needing** to **duplicate** it.
